A-E financial-stability test scenarios

Five paired cases, one per project lease-feasibility grade. All documents and identities are synthetic. Each case contains a six-month bank statement, a ten-page CRIB-style report, an explanation and verified expected inputs.

The project lease grade and the bureau risk subgrade are different fields. These selected cases use bureau A1, B1, C1, D1 and E1 as representative inputs; their expected lease outcomes were checked against the actual project C# engine.

Lease grade	Scenario	Income / month	Debt / month	Score / action
A	Financially stable - strong capacity	200,000	20,000	100 / FastTrack
B	Financially sound - moderate commitments	150,000	25,000	80 / Proceed
C	Borderline - irregular repayment behaviour	100,000	25,000	55 / ManualReview
D	High risk - heavy debt and serious arrears	100,000	35,000	40 / Escalate
E	Financially unsuitable - over capacity with default history	80,000	40,000	0 / Reject

Every case requests a LKR 20,000 monthly lease payment. A and B are financially sound, C needs manual review, D has serious credit risk despite passing the capacity rule, and E both exceeds capacity and has verified default history.

How to test: select one grade folder, upload its bank and CRIB PDFs, review the extracted inputs, then compare your result with expected.json. The lease request is provided separately in expected.json. Existing debt must come from verified monthly installments, never outstanding principal.

Validation: bank totals, running balances and daily averages were checked. The actual C# scoring engine matched all five representative cases. Live OCR and end-to-end extraction remain untested.

Grade A - Financially stable - strong capacity

A salaried applicant receives LKR 200,000 every month. Existing loan repayments are only LKR 20,000, all facilities are current, and the account retains a substantial cash buffer. The requested LKR 20,000 lease installment is comfortably affordable.

Monthly verified income	LKR 200,000.00
Existing monthly debt repayments	LKR 20,000.00
Requested monthly lease	LKR 20,000.00
Debt + lease / income	20%
Daily average bank balance	LKR 162,918.03
60% maximum total monthly payments	LKR 120,000.00
Available monthly lease capacity	LKR 100,000.00
Bureau subgrade (synthetic)	A1
Project lease grade / total score	A / 100
Expected action	FastTrack

Bank statement evidence

Six equal monthly salary credits of LKR 200,000, LKR 20,000 monthly debt repayments, routine personal expenses and own-account savings transfers. The statement opens and closes each month at LKR 160,000. No overdraft occurs.

CRIB report evidence

Synthetic bureau grade A1. Two active individually owned facilities with monthly installments of LKR 12,000 and LKR 8,000. No current arrears or adverse repayment history; a prior facility was settled normally.

Why this grade

Combined debt plus lease is 20% of income, earning the best debt-service tier. Stable income earns 25 points, the daily average balance covers more than six lease installments, and verified credit family A earns 20 points. No penalties apply.

What to test

Use this as the baseline financially stable case. A large own-account transfer is saving movement, not a living expense or a reduction of verified salary.

Grade B - Financially sound - moderate commitments

A salaried applicant receives LKR 150,000 monthly and repays LKR 25,000 of existing loans. Repayments are timely, but the cash buffer and debt burden are weaker than in scenario A. A LKR 20,000 lease remains manageable.

Monthly verified income	LKR 150,000.00
Existing monthly debt repayments	LKR 25,000.00
Requested monthly lease	LKR 20,000.00
Debt + lease / income	30%
Daily average bank balance	LKR 79,475.41
60% maximum total monthly payments	LKR 90,000.00
Available monthly lease capacity	LKR 65,000.00
Bureau subgrade (synthetic)	B1
Project lease grade / total score	B / 80
Expected action	Proceed

Bank statement evidence

Six equal monthly salary credits of LKR 150,000, monthly debt payments of LKR 25,000 and regular living expenses. Each month opens and closes at LKR 80,000. There are no overdrafts.

CRIB report evidence

Synthetic bureau grade B1. Active monthly installments are LKR 15,000 and LKR 10,000. No current arrears; repayment history is current and the closed facility was settled.

Why this grade

Combined debt plus lease is 30% of income, giving 25 debt-service points. Stable income contributes 25 points, an approximately four-installment cash buffer contributes 15, and credit family B contributes 15. Total: 80.

What to test

B is still financially sound. It has less capacity and liquidity than A, but does not need a high-risk label merely because debt exists.

Grade C - Borderline - irregular repayment behaviour

A salaried applicant receives LKR 100,000 monthly and already pays LKR 25,000 toward loans. Adding the LKR 20,000 lease uses 45% of income. The credit report shows irregular repayment history, including a prior 35-day delinquency and a current 15-day arrears record.

Monthly verified income	LKR 100,000.00
Existing monthly debt repayments	LKR 25,000.00
Requested monthly lease	LKR 20,000.00
Debt + lease / income	45%
Daily average bank balance	LKR 76,196.72
60% maximum total monthly payments	LKR 60,000.00
Available monthly lease capacity	LKR 35,000.00
Bureau subgrade (synthetic)	C1
Project lease grade / total score	C / 55
Expected action	ManualReview

Bank statement evidence

Six equal monthly salary credits of LKR 100,000 and LKR 25,000 in monthly debt payments. The opening and closing balance is LKR 80,000. Salary is stable; the weakness here is repayment behaviour and combined commitments.

CRIB report evidence

Synthetic bureau grade C1. Monthly installments are LKR 15,000 and LKR 10,000. Facility 1 has LKR 7,500 arrears and current NDIA of 15 days; the highest NDIA in the twelve-month profile is 35 days. Facility 2 is current.

Why this grade

Combined commitments of 45% of income earn only 10 debt-service points. Income consistency earns 25, liquidity earns 15, and credit family C earns 5. No default penalty is assumed. Total: 55.

What to test

The 60% capacity test passes, yet repayment irregularities and weaker debt-service scoring lead to manual review. Passing affordability does not establish low credit risk.

Grade D - High risk - heavy debt and serious arrears

A salaried applicant receives LKR 100,000 monthly and owes LKR 35,000 in monthly installments. The proposed LKR 20,000 lease takes combined commitments to 55% of income. A facility is 95 days in arrears with LKR 63,000 overdue.

Monthly verified income	LKR 100,000.00
Existing monthly debt repayments	LKR 35,000.00
Requested monthly lease	LKR 20,000.00
Debt + lease / income	55%
Daily average bank balance	LKR 75,868.85
60% maximum total monthly payments	LKR 60,000.00
Available monthly lease capacity	LKR 25,000.00
Bureau subgrade (synthetic)	D1
Project lease grade / total score	D / 40
Expected action	Escalate

Bank statement evidence

Six monthly salary credits of LKR 100,000 and LKR 35,000 of regular monthly debt payments. Each month opens and closes at LKR 80,000. Current autopay records can coexist with unpaid historic arrears; the bank payments do not clear the credit report automatically.

CRIB report evidence

Synthetic bureau grade D1. Installments are LKR 21,000 and LKR 14,000. Facility 1 reports LKR 63,000 arrears and current NDIA of 95 days. Its evidence-window delinquency worsens from 30 to 95 days. No historical default boolean is inferred solely from the days-in-arrears value.

Why this grade

A 55% combined payment ratio earns zero debt-service points. Stable income earns 25, liquidity earns 15, and credit family D earns zero. The explicit verified fixture assumption sets default history to false. Total: 40.

What to test

Capacity still passes the configured 60% rule, but serious credit risk produces Escalate. D is not safe merely because its payment ratio is below 60%.

Grade E - Financially unsuitable - over capacity with default history

A salaried applicant receives LKR 80,000 monthly but already repays LKR 40,000. Adding a LKR 20,000 lease consumes 75% of income, exceeding the 60% cap. Current severe arrears and a historical written-off facility add major risk.

Monthly verified income	LKR 80,000.00
Existing monthly debt repayments	LKR 40,000.00
Requested monthly lease	LKR 20,000.00
Debt + lease / income	75%
Daily average bank balance	LKR 29,393.44
60% maximum total monthly payments	LKR 48,000.00
Available monthly lease capacity	LKR 8,000.00
Bureau subgrade (synthetic)	E1
Project lease grade / total score	E / 0
Expected action	Reject

Bank statement evidence

Six monthly salary credits of LKR 80,000 and LKR 40,000 in existing debt payments. Each month opens and closes at LKR 35,000. The daily average balance is much smaller than in the other scenarios. No overdraft is needed for this applicant to be financially unsuitable.

CRIB report evidence

Synthetic bureau grade E1. Active monthly installments are LKR 24,000 and LKR 16,000. Facility 1 has LKR 72,000 arrears and current NDIA of 120 days. A previously closed facility has a synthetic LKR 50,000 write-off; the tester verifies default history as true.

Why this grade

Combined payments of 75% earn zero debt-service points. Stable income earns 25 and liquidity earns 5, while credit family E earns zero. The default penalty subtracts 50; the score is clamped to zero. The capacity rule also fails by LKR 12,000 per month.

What to test

Grade E can occur despite a regular salary and a positive bank balance. Excessive obligations and verified adverse history drive the result.
