LANTERN FIELD | SYNTHETIC PROPOSAL

01 | Applicant and project summary

1. Applicant identity

Applicant name: Mira Senali Testdeniya. Applicant type: Individual. This is a fictional adult applicant created solely for research testing. All names, identifiers, contacts and declarations in this document are synthetic.

Field	Synthetic declaration
Residential address	24 Lantern Lane, DEVELOPMENT_RESIDENTIAL_VILLAGE, DEVELOPMENT_RESIDENTIAL_DISTRICT, DEVELOPMENT_RESIDENTIAL_PROVINCE. This is NOT the proposed project site.
Residential GN division	DEVELOPMENT_RESIDENTIAL_GN
Residential DS division	DEVELOPMENT_RESIDENTIAL_DS
Telephone and email	TEST-PHONE-0001 (deliberately non-dialable); mira.testdeniya@example.invalid (non-deliverable test email).
Applicant NIC / test identifier	SYNTHETIC-NIC-IND-001. Not a government-issued NIC; deliberately invalid as a real identity credential.
Date of birth and age	12 April 1990; age 36 on proposal date 19 October 2026.
Sex	Female (fictional test profile).
Marital status	Single (fictional test profile).
Education	Completed secondary education; fictional 2010 Agricultural Practice Certificate, TEST TRAINING CENTRE.
Professional qualifications	Fictional six-month crop-management and drip-irrigation training, TEST TRAINING CENTRE, 2011. No real credential or licence is asserted.

2. Project name

Project title: Lantern Field Papaya and Vegetable Project. Proposal reference: SYNTHETIC-12A-2026-001; document version 1.0, dated 19 October 2026.

3. Project nature

Proposed land use: Agriculture. Project purpose: establish a small irrigated papaya and vegetable farm for the domestic market on 12 acres under a requested 15-year lease.

4. Project introduction

Project description: A fictional individual-operated agricultural enterprise allocating 6 acres to papaya, 4 acres to seasonal vegetables, 1 acre to access/storage/water infrastructure and 1 acre to conservation/drainage. The plan provides 6 full-time positions including the owner-manager. Initial investment: LKR 12,000,000, entirely fictional owner equity. This is a proposed plan, not an operational farm or approved lease.

LANTERN FIELD | SYNTHETIC PROPOSAL

02 | Proposed land, tenure and buildings

5. Proposed land location and lease request

Land location: DEVELOPMENT_MOCK_FARM_12A, on SYNTHETIC TEST ACCESS ROAD R-TEST-01. Project Province: DEVELOPMENT_MOCK_PROVINCE_A; District: DEVELOPMENT_MOCK_DISTRICT; Divisional Secretariat Division: DEVELOPMENT_MOCK_DS; Grama Niladhari Division: DEVELOPMENT_MOCK_GN_001. These are synthetic administrative identifiers for the Development scenario, not real jurisdictions.

Project input	Explicit requested value
Requested land extent / unit	12 acres (4.85622770688 hectares). The entire synthetic parcel is requested.
Requested lease period	15 years; intended test period 1 January 2027 to 31 December 2041, subject to actual authorisation and commencement.
Synthetic cadastral reference	DEVELOPMENT-MOCK-12A-001; a fixture identifier, not a survey or C1 ownership record.
Initial investment / currency	12,000,000 / LKR. This is the total initial investment, not annual turnover or operating expenditure.

6. Existing business registration — inapplicability

No existing business is being extended or relocated. This is a proposed new individual enterprise. Existing-business registration details are therefore inapplicable. No registration certificate is claimed or attached. Any registration needed for actual operations would be obtained separately; this declaration is synthetic source evidence for template applicability only.

7. Ownership form

The applicant is an Individual / proposed sole proprietor. Requested tenure is leasehold only; freehold ownership of the land is not claimed. The project is not a company, partnership or cooperative. No actual land allocation, title, consent or official approval is asserted.

8. Initial buildings and structures

Planned initial construction: one simple single-storey, open-sided crop packing/storage shed, 80 square metres, and a 20-square-metre water-tank base. Total structural footprint: 100 square metres, within the 1-acre infrastructure allocation. No residence, factory or worker accommodation is proposed. Estimated shed cost is LKR 900,000; the tank/base and drip network are included in the LKR 2,100,000 irrigation allocation. Required construction and access permissions are not yet granted.

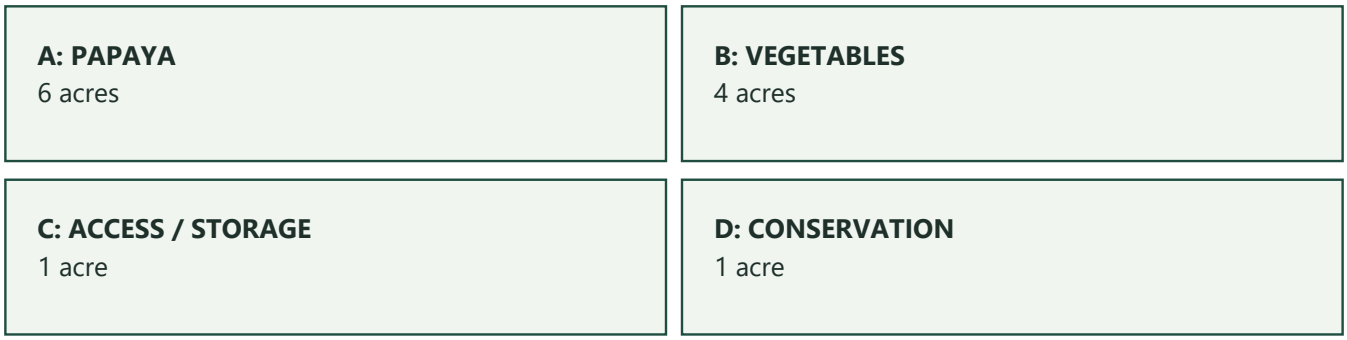

LANTERN FIELD | SYNTHETIC PROPOSAL

03 | Initial site layout and future buildings

9. Initial site layout

Illustrative allocation at establishment; schematic only, not to scale and not a cadastral survey. The four allocations sum exactly to 12 acres. The packing shed and tank base are contained within, and do not add to, the 1-acre infrastructure block.

Allocation	Acres	Purpose
Block A	6	Papaya cultivation, drip irrigation and internal crop rows.
Block B	4	Seasonal vegetables with rotation beds and irrigation.
Block C	1	Access track, 80 m2 shed, 20 m2 tank base, loading and water facilities.
Block D	1	Vegetated margins, drainage and soil/water conservation.
TOTAL	12	No additional land is requested.

10. Future buildings over the 15-year period — inapplicability

No additional buildings or expansion of the 100-square-metre initial structural footprint are planned during years 1–15 (2027–2041). The initial 80-square-metre shed and 20-square-metre tank base will be maintained. Future additional-building descriptions/areas are inapplicable because none are planned. Any later proposal to construct more would require a separately reviewed revision and applicable permissions; it is not approved by this document.

LANTERN FIELD | SYNTHETIC PROPOSAL

04 | Development layout and access sketch

11. Future development layout

The 12-acre boundary allocation remains unchanged for all 15 requested years. Years 1–5: establish crops and stabilize irrigation. Years 6–10: renew papaya blocks progressively within the same 6 acres; continue vegetable rotation within 4 acres. Years 11–15: renew equipment, maintain drainage and prepare an end-of-term land-restoration plan. No new building, adjacent parcel or extra acreage is included.

2027–2031 Establish A + B	**2032–2036** Renew within A + B
2037–2041 Maintain / restore	**C + D unchanged** 1 acre + 1 acre

12. Access and location sketch

Schematic route: fictional Test Junction J-01 → SYNTHETIC TEST ACCESS ROAD R-TEST-01 → proposed gate → internal access in Block C → Blocks A and B. North is shown schematically; no surveyed bearings, legal right of way, real public-road connection or approved access is claimed.

NORTH (schematic) Test Junction J-01	**R-TEST-01** Synthetic access road
Proposed gate Block C access	**Crop blocks A / B** Drainage margin D

These two sketches describe a fictional development intention. They do not prove ownership, permitted access, environmental clearance, absence of overlap or absence of complaints.

LANTERN FIELD | SYNTHETIC PROPOSAL

05 | Employment, inputs and raw materials

13. Employment plan

Expected employment: 6 full-time positions, including the owner-manager and 5 hired staff. All salary values are fictional planning allowances. No seasonal positions are counted in the six-person total.

Role	Persons	Monthly LKR / person	Monthly total LKR
Owner-manager	1	80,000	80,000
Field supervisor	1	60,000	60,000
Field workers	4	35,000	140,000
TOTAL	6	—	280,000

14. Raw material and input sources

Raw-material requirements apply to this agricultural project. Planned inputs and sources are fictional procurement assumptions, not supply agreements. Initial planting stock is a separate startup cost; recurring materials below are operating inputs.

Input	Planned synthetic source
Compost / soil amendments	TEST SUPPLIER A, within DEVELOPMENT_MOCK_DISTRICT.
Vegetable seed / replacement stock	TEST NURSERY B, within DEVELOPMENT_MOCK_DS.
Crop-protection / biological inputs	TEST SUPPLIER C; use only products permitted at actual operation.
Consumable crates / packing supplies	TEST PACKAGING D, domestic supplier.

15. Recurring raw-material costs

Input	Monthly budget LKR	Annual budget LKR
Compost / soil amendments	45,000	540,000
Seed / replacement stock	20,000	240,000
Crop-protection / biological inputs	15,000	180,000
Consumable crates / supplies	10,000	120,000
TOTAL	90,000	1,080,000

The LKR 90,000 monthly input subtotal is included once in the monthly operating budget on page 7. The LKR 1,400,000 startup planting allocation on page 8 establishes the farm; it is not included again in recurring inputs.

06 | Markets, marketing and turnover

16. Current domestic market

As a new unestablished project, current sales and signed customer contracts are zero. The assumed target market consists of domestic fresh-produce wholesalers and local retailers in the fictional DEVELOPMENT_MOCK_DISTRICT. The planning price is LKR 100 per kilogram for both papaya and mixed vegetables. This is a synthetic price assumption, not a market quotation, secured price or guaranteed demand.

17. Future marketing and foreign-market inapplicability

Domestic strategy: grade produce at the shed, use reusable crates, schedule two consolidated collections weekly at maturity and seek two independent wholesale buyers after permission to operate. Keep batch and complaint records and adjust crop timing to demand. Foreign-market strategy is inapplicable: no exports, foreign buyers, export revenue or foreign-market certification are proposed during the 15-year test plan. No buyer agreement or certification is claimed.

18. Project turnover projections

All forecasts use constant fictional 2026 LKR prices. The first operating year assumes half of steady-state production while crops establish; years 2 and 3 assume steady production. Turnover is gross sales, not investment, profit or secured revenue.

Operating year	Papaya sales LKR	Vegetable sales LKR	Total turnover LKR
2027 — establishment	5,400,000	1,600,000	7,000,000
2028 — full production	10,800,000	3,200,000	14,000,000
2029 — full production	10,800,000	3,200,000	14,000,000

Demand and price risk: maintain multiple prospective buyers and crop rotation; review actual prices monthly. No public procurement order, guaranteed offtake or official marketing approval is asserted.

LANTERN FIELD | SYNTHETIC PROPOSAL

07 | Sales estimates and monthly working capital

19. Sales-income calculation

Steady-state annual sales for 2028 and 2029 reconcile to LKR 14,000,000. The 2027 half-output assumption yields LKR 7,000,000.

Crop	Full-year quantity kg	LKR / kg	Annual sales LKR
Papaya	108,000	100	10,800,000
Mixed vegetables	32,000	100	3,200,000
TOTAL	140,000	—	14,000,000

20. Monthly working-capital budget

Monthly operating cash requirement: LKR 500,000. Annual operating cash requirement: LKR 6,000,000. Initial six-month working-capital reserve: LKR 3,000,000 (6 × 500,000), included within the LKR 12,000,000 initial investment. The reserve is a financing allocation, not an extra operating expense.

Operating cost	Monthly LKR	Annual LKR
Payroll — 6 positions	280,000	3,360,000
Recurring raw materials — page 5	90,000	1,080,000
Water / energy	30,000	360,000
Transport / collection	50,000	600,000
Repairs / maintenance	20,000	240,000
Administration / insurance allowance	15,000	180,000
Environmental monitoring allowance	15,000	180,000
TOTAL	500,000	6,000,000

Lease rent and taxes are not known and are excluded from this operating illustration; their amounts must be determined separately. They are not assumed to be zero. No debt is planned, so financing interest is not included. Financial viability would need reassessment once actual rent, taxes and permissions are known.

08 | Initial investment, financing and production

21. Initial project capital cost and financing

TOTAL INITIAL INVESTMENT: LKR 12,000,000. INVESTMENT CURRENCY: LKR. This total comprises LKR 9,000,000 establishment capital plus a LKR 3,000,000 opening working-capital reserve. All allocations are synthetic estimates.

Initial investment item	Amount LKR
Land preparation / crop-bed establishment	1,800,000
Drip irrigation, tank and 20 m2 base	2,100,000
Farm tools and small equipment	1,500,000
Initial planting stock / establishment materials	1,400,000
80 m2 packing and storage shed	900,000
Initial soil/water testing and setup	600,000
Capital contingency allowance	700,000
ESTABLISHMENT CAPITAL SUBTOTAL	9,000,000
Opening working capital: 6 months × LKR 500,000	3,000,000
TOTAL INITIAL INVESTMENT	12,000,000

Funding source: fictional owner equity LKR 12,000,000 (100% of initial investment); loans LKR 0; grants LKR 0. Funding sources total exactly LKR 12,000,000. This is a synthetic funding plan, not proof of funds, a bank approval or an actual commitment. The contingency is included once in the capital subtotal.

22. Expected agricultural production

Crop / allocation	Assumed full-year yield	Full-year output
Papaya — 6 acres	18,000 kg per acre	108,000 kg
Mixed vegetables — 4 acres	8,000 kg per acre	32,000 kg
Infrastructure + conservation — 2 acres	No saleable crop output	0 kg
TOTAL — 12 acres	Fictional yield assumptions	140,000 kg

Year 2027 produces 54,000 kg papaya and 16,000 kg vegetables (70,000 kg total); 2028–2029 use full-year quantities. Yield is a forecast and is not guaranteed.

LANTERN FIELD | SYNTHETIC PROPOSAL

09 | Indicative profit, loss and cash forecast

23. Three-year forecast before unpriced lease rent and taxes

Illustrative annual depreciation is LKR 900,000: a simplified planning charge of LKR 9,000,000 establishment capital over ten years, with no residual value. This is a test-model assumption, not a tax or accounting determination. Working-capital reserves are not depreciated.

Line item — LKR	2027	2028	2029
Gross sales / turnover	7,000,000	14,000,000	14,000,000
Operating cash costs	6,000,000	6,000,000	6,000,000
Operating cash surplus, before rent/tax	1,000,000	8,000,000	8,000,000
Illustrative depreciation	900,000	900,000	900,000
Indicative surplus after depreciation, before rent/tax	100,000	7,100,000	7,100,000

The final line is not net profit after all obligations. Lease rent, taxes, any required statutory charges, owner withdrawals and unplanned reinvestment are unpriced and excluded, not zero. This proposal cannot establish an approved financial appraisal.

23A. Cash reconciliation — not additional investment

Cash line — LKR	2027	2028	2029
Opening working reserve	3,000,000	4,000,000	12,000,000
Sales less operating cash costs	1,000,000	8,000,000	8,000,000
Illustrative closing cash before rent/tax/withdrawals	4,000,000	12,000,000	20,000,000

At establishment, LKR 12,000,000 owner equity funds LKR 9,000,000 capital expenditure and LKR 3,000,000 opening reserve. Subsequent projected sales fund operating costs. No second equity injection or double counting of the reserve is assumed. Price/yield downside and actual lease charges may reduce these surpluses.

10 | Implementation and management

24. Proposed implementation schedule

Planning date: 19 October 2026. Requested lease duration: 15 years. The illustrative programme starts 1 January 2027 and ends 31 December 2041 only if the required lease, site access and permissions are actually granted. If not, all start dates must be rebaselined; this programme is not authority to occupy or build.

Proposed period	Activity / milestone	Responsible role
Oct–Dec 2026	Submit proposal, clarify requirements, seek required permissions; no site occupation assumed.	Fictional applicant / owner-manager
Jan–Mar 2027	After permissions: establish beds, irrigation, tank and shed within approved footprint.	Owner-manager and field supervisor
Apr–Jun 2027	Plant papaya and vegetable rotation; train six staff; establish records.	Field supervisor
Jul–Dec 2027	Partial harvest and first domestic sales; review water use and costs monthly.	Owner-manager / field workers
2028–2031	Steady production; annual review and preventive maintenance.	Owner-manager / supervisor
2032–2036	Renew crops progressively within existing allocations; no new buildings.	Owner-manager / supervisor
2037–2041	Maintain assets, restore exhausted beds and prepare end-of-term restoration/lease review.	Owner-manager

Management controls: maintain payroll, sales, water, crop-input and maintenance logs. Review output (target 140,000 kg/year at steady state), six-person employment, operating cash cost (LKR 6,000,000/year) and drainage condition quarterly. Correct deviations through a documented revised plan; do not treat this schedule as an institutional approval.

11 | Environment, sustainability and declarations

25. Environmental impacts and mitigation

Predicted risks include soil erosion, nutrient runoff, water demand, packaging waste and equipment noise. Mitigation plan: preserve the 1-acre conservation/drainage block; use vegetated margins and contour beds; schedule drip irrigation by soil moisture; compost suitable organic residue; segregate and return containers; prevent chemical discharge; maintain a spill kit; work in daylight. The LKR 15,000 monthly monitoring allowance supports logs and periodic checks. These are proposed measures, not an environmental impact assessment, clearance or evidence of site suitability.

26. Sustainability and maintenance

Rotate vegetables within 4 acres, renew papaya within 6 acres, maintain the 1-acre infrastructure area and retain the 1-acre conservation allocation for all 15 years. Inspect drip lines weekly, drainage monthly and the shed/tank quarterly; budget LKR 20,000/month for repairs. Record water use, soil cover, input use, staff training and waste transfers. Use the domestic marketing plan to spread demand risk. End-of-term intention is orderly restoration under the actual lease terms, not an assumed extension or handoff approval.

27. Synthetic applicant declaration, date and contact

I, Mira Senali Testdeniya, declare solely within this fictional research scenario that this proposal states my proposed 12-acre agricultural plan, requested 15-year lease and LKR 12,000,000 initial investment. I understand that submission, OCR extraction, completeness review and C4 findings do not grant a lease or approve an application. I will seek required permissions before any actual occupation, work or construction.

Synthetic typed signature: MIRA SENALI TESTDENIYA — TEST DECLARATION ONLY. No real handwritten or digital signature is supplied. Date: 19 October 2026. Contact: TEST-PHONE-0001; mira.testdeniya@example.invalid. No real NIC, contact or legal signature is asserted.

Supporting-document references: internal site-layout annex (page 3), development/access sketches (page 4), employment/input schedules (page 5), financial schedules (pages 7–9), implementation schedule (page 10) and environmental plan/declaration (page 11). No external approval certificate, identity document, survey, bank letter or official clearance is attached.

Legal / statutory basis: user-project test requirements STD-PROP-2026-V1, version 1.0; this is not law. No verified statutory citation or official approval is claimed. This proposal makes no assertion of no complaints, no disputes or no spatial conflict. Such coverage belongs only to separately selected, explicitly synthetic screening evidence.
